

Premium Supplements

for Optimum Health

Omega fatty acids are an important part of a healthy and balanced diet.

Providing the nutrients necessary for the healthy functioning of every living cell in the body, these essential fats aid neurological function and are converted into health-giving substances including prostaglandins and leukotrienes which regulate several important bodily functions. Igennus sources only the most natural ingredients, for maximum retention of natural phytonutrients and triterpenes.

Igennus' range of highly concentrated DHA-free supplements has been formulated to optimise the important role of the **omega-3** fatty acid EPA in the body. Containing **ultra-pure** EPA our supplements maximise the bioavailability of this important nutrient, allowing EPA to play an active role in the brain.

Vegepa is a patented formulation which combines the benefits of **ultra-pure EPA** from **marine fish oil** and **GLA** from **organic virgin evening primrose oil**, providing a highly concentrated source of **omega-3 & 6 long-chain fatty acids** and **botanical triterpenes**. Molecularly distilled for optimum purity, Vegepa is endorsed by medical professionals for a variety of conditions.

OmegaForce is a patented formulation containing **omega-3, 6 & 9 long-chain fatty acids** with a multitude of health-enhancing properties. This synergistic combination of natural oils includes **pure EPA** from marine fish oil, **organic virgin evening primrose oil**, CLA and extra-virgin olive oil. OmegaForce also contains a botanical source of **triterpenes** for added immune support.

OmegaFlex is a patented formulation of **omega-3, 6 & 9 long-chain fatty acids**, **botanical triterpenes** and **vegetarian glucosamine**. This combination of natural ingredients works synergistically to maximise the benefits to the health of the joints while also providing relief from discomfort caused by stiffness and aching. OmegaFlex is suitable for adults and children over the age of 12 years.

VegeCO and **MiniVegeCO** provide the necessary **co-factors** for the effective absorption and utilisation of all omega fatty acids by the human body. Co-factors are vital for ensuring the presence of certain enzymes which act as **catalysts in the omega-3 & 6 conversions**, as well as the conversion into eicosanoids – vital anti-inflammatory hormones which aid fluid balance, blood clotting and circulation.
